Notice of Compliance

Revised MARPOL Annex VI & NO_x Technical Code 2008

Engine Family D9-MG

AB Volvo Penta

This is to State

That above-mentioned engine family has been established under the requirements of Technical Code 2008 on Control of Emission of Nitrogen Oxides from Marine Diesel Engines showing that all engines covered by the engine family comply with the emission limits of Regulation 13.4 of Revised MARPOL Annex VI.

This is to Note

- 1. That every member engine of the above-mentioned engine family shall be subject to pre-certification in accordance with the procedure established to the parent engine to verify that the member engine, as designed, equipped and adjusted, complies with the applicable regulation 13.4 of Revised Annex VI of the Convention; and
- 2. That this Notice of Compliance does not replace the EIAPP Certificate to be issued for each individual engine.

13672

This is to Confirm

- 1. That the above-mentioned parent engine representing the above-mentioned engine family as specified in the document 'Technical File' has been approved in accordance with all requirements as applicable. The engine family will always represented by the parent engine, its approved Technical File and the family documentation; and
- 2. That the selection of the parent engine has been carried out on the basis of tests and engineering judgement in accordance with the applicable chapter of the NOx Technical Code 2008 providing that the parent engine incorporates those features and/or characteristics which most adversely affect the NOx emission level and result in the highest NOx emission level among all of the engines in the family; and
- 3. That adequate arrangements have been made by the engine manufacturer to ensure effective control of the conformity of production for all member engines within the family.

| Settings | |
|---|--------------------------------|
| Maximum sea water temp., if applicable | 38℃ |
| Maximum charge air temp., if applicable | 45℃ |
| Maximum fresh water temp. from Keel Cooler, if applicable | 38℃ |
| Low / high temp. cooling system set points | N/A / 98 ℃ |
| Maximum inlet depression | 3 kPa |
| Maximum exhaust back pressure | 15 kPa |
| Fuel oil specification | According to operator's manual |
| Fuel oil temp. | 40℃ |
| Lubricating oil specification | According to operator's manual |

2. On board verification procedure

| Component | Procedure / location of ID-numbers | Remarks |
|--------------------------------------|--|--|
| Cylinder head | Check ID-no on machined surface (exhaust side). Inspection is recommended at overhaul when the engine is dismantled. | See Figure 1 |
| Piston | Check ID-no on piston crown. Inspection is recommended at overhaul when cylinder head is removed. | See Figure 3 |
| Turbocharger | Check ID-no on metal plate on compressor house. | Waste gate. Opening pressure 2,39 bar at stroke 2,87 mm. |
| Unit injector | Check ID-no on injector body. Inspection is recommended at overhaul when the engine is dismantled and the injector unit is visible. | |
| Injector nozzle | N/A | See ID-no on Unit Injector. |
| Electronic control unit and data set | Check ID-no. on label. The data set can be checked by using a diagnostic tool at a service shop. | |
| Charge air cooler | The ID-no is located at the front side of the charge air cooler. The ID-no is included in the tooling. Inspection is recommended at overhaul when charge air cooler is dismounted. | |
| Compression ratio | Determined by the correct piston and cylinder head combination. Inspection is recommended at overhaul when cylinder head is removed. | |
| Camshaft | The ID-no. is located at the rear end of the camshaft. Inspection is recommended at overhaul when valve cover is removed and the camshaft is visible. | See Figure 2 |

Important! The ID-numbers that can not be controlled unless the engine is taken apart shall only be checked at regular overhaul when the engine is taken out of service and dismantled for maintenance. Check only if considerable doubt of the correctness of the ID-number exist.

4. Specification of spare parts

Ship owners or persons responsible for ships required to undergo an engine parameter check method shall maintain on board a record book of engine parameters for recording of all the changes made relative to an engine's components and settings.

If any adjustments or modifications are made to any engine after its delivery from Volvo Penta, a full record of such adjustments or modifications shall be recorded in the engine's record book of engine parameters.

Any changes or modifications of the approved parameters and components of this engine that are not allowed by Volvo Penta may result in that the engine no longer complies with the approved specification. Volvo Penta has no responsibility for compliance if parts and components are used other than those authorized by Volvo Penta.
